

Six Ways Cities Can Engage on Ghost Gear

Cities can support programs such as [Fishing for Litter](#), which encourages fishers to collect and bring back the debris that gathers in their nets. Municipal authorities can raise awareness, provide funding, and help create facilities at ports where collected waste can be properly disposed.

Fisher Debris Retrieval Programs

Fishers and fishing companies need viable disposal solutions for fishing gear when it can no longer be used or repaired. Municipal authorities should work with ports to build port reception facilities for end-of-life fishing gear and assist the port in transporting the recyclable material to the recycler.

Port Reception Facilities

A major cause of gear loss is extreme weather events, which will become more frequent as climate change worsens. Cities can assist ports in developing emergency plans for such disasters. Plans should ensure that fishers can safely retrieve deployed gear prior to extreme weather; that fishers have adequate insurance for their gear and vessels; and can facilitate safe and effective gear retrievals after major storms.

Extreme Weather Preparedness

Most fishing nets and ropes are made of highly recyclable materials. One way to help local recycling facilities with this challenge is to invest in a commercial shredder at the portside or harbor to process the nets and ropes prior to being sent to a recycling company.

Gear Recycling

Report lost gear! Whether it's in the water or on the shore, anyone can report gear that is either lost or found through the [GGGI Ghost Gear Reporter App](#). The app is free and easy to use in multiple languages.

Ghost Gear Reporting

Ghost gear makes up 46-70% of the floating macroplastic in our ocean by weight. While it is important to educate people about the impacts of ghost gear on marine life and fisher livelihoods; it is also vital to understand the unintentional causes and cost. No fisher wants to lose their gear and it's important that fishers are seen by cities as part of the solution.

Raise Awareness

The [Global Ghost Gear Initiative](#) (GGGI) is the only cross-sectoral alliance dedicated to solving the problem of abandoned, lost, or otherwise discarded fishing gear around the world. The GGGI brings together more than 100 stakeholder groups, including national governments, representatives from civil society, the private sector, public agencies, academia, intergovernmental organizations, and others from across the fishing industry to tackle ghost gear.
